

GEL COLOR FILTERS

Color the World

Apollo gel color filters help create mood, emotion and atmosphere by changing the color and quality of light. The filters are available in a palette of solid colors, color correction and diffusion textures in addition to, a variety of sizes and products including, sheets, rolls, strings, tubes and wraps.

The filters are designed to meet the specific demands of the lighting industry. They are made from a heat resistant polyester material that is highly durable and resistant to punctures and tears. The dye is added through a double coating process that creates an optically clear color that will not scratch. The filters are consistent from batch to batch and provide superior transmission of color.

Apollo gel color filters provide a pallet of consistent colors that are ideal for installations in both interior and exterior applications.

Apollo gel color filters will help you Color the World.

Apollo Gel / Color Filters

A palette of over 150 color, color correction and diffusion filters will help you color the world.

- 20" x 24" Sheets or 2' x 25' Rolls

Gel Strings

The gel string allows multiple colors to be easily and inexpensively changed from one production to the next. The strings are a roll of 18 gel filter colors assembled and ready to use in a scroller. The gel strings are available in a pre-selected set of "Theater" or Rock 'n Roll" colors. Gel strings can be made in custom colors and sizes.

Theater - 7.25 PRO

GEL COLOR FILTERS

PerfGel™

No more measuring and cutting is required with PerfGel™. Easy-to-tear perforations, cut to your specifications, on a 20" x 24" sheet will save time and labor costs.

Gel Tubes

Gel tubes can add virtually any color to fluorescent lighting. The color filter is inserted into a clear polycarbonate tube, complete with end caps. The fluorescent light then slides inside the tube and is ready

for installation. The tube will also protect from shattered glass if the lamp is ever broken. Multiple tubes can be used to create an endless palette of colors.

UV Gel Tubes

Protect fabrics, painting and documents with UV filtering polycarbonate tubes. Gel color can be included to add virtually any color in addition to the UV protection.

GelWrap™

GelWrap™ is a cost effective way to add virtually any color to fluorescent lighting. Scored seams shape the gel into a triangle that can be fed and "locked" around the fluorescent tube without removing it from the fixture. Storage and shipping costs are minimized since GelWrap™ is shipped and stored flat.

Accessories

Gel Shield

A gel shield helps extend the life of gel by reflecting infrared energy. This prevents the gel from absorbing IR energy as heat. The shields are ideal for use on fixtures 1,000 watts or less.

ThinLine™ Gel Frames

ThickLine™ Gel Frames

Gel Frames

Apollo ThinLine™ and Thickline™ Gel Frames conveniently hold a piece of gel in the color frame channel on the front of the fixture.

The Thinline™ is very cost effective. It is made from black, non-reflective, high-temperature aluminum.

The Thickline™ is made from durable powder-coat black cold rolled steel.

Gel Cabinet

The hand-crafted Baltic birch gel cabinet provides attractive and convenient storage for gel sheets. Each of the 12 sliding shelves holds up to 50 sheets of gel.
